Rail Products
A Harsco Rail Company

OEM Quality Engineered for Your High Performance MOW Needs

JK ToughGrit uses only the highest quality of tungsten carbide that is deposited evenly through the weld and penetrates parent material up to 0.12:

- Extremely hard tungsten carbide grit and proprietary make up wire for longer life (2 to 3X longer than competitor products)
- Mesh sorted tungsten carbide grit evenly distributed in the overlay for superior wear resistance
- Penetration up to .12 inches into parent material for consistent overlay adhesion to the part

JK SuperCarb uses only the highest grade of carbide in combination with a proprietary brazing process to create superior products that perform above expectations in the harshest rail applications.

- Formulated mix of tungsten carbide and cobalt is of quality "Die Grade" yielding outstanding impact and wear resistance
- Only virgin tungsten powder contains a crystalline angular grain structure for maximum strength
- Tiles are finished in state-of-the-art sinter Hot Isostatic Press furnaces to virtually eliminate residual porosity
- Proprietary brazing process generates optimum braze strength:
 - Tiles have micro-bumps and ridges to control braze alloy joint thickness for optimum braze shear strength
 - Tiles are nested in machined pockets for increased strength
 - Tri-metal braze alloy is specially devised and engineered for bonding tungsten carbide to steel
 - High temperature brazing process yields the strongest bond possible
 - Layered braze alloys to absorb the different expansion and contraction rates of tungsten carbide and steel
